

### OUTDOOR FABRIC

This acrylic fabric is created through a unique process that adds coloured pigments during fiber production. The colour is locked into the fabric and lasts as long as the fabric does even with lengthy outdoor exposure. Consequently the colours will resist fading from UV rays, chlorine, salt water and washing. AXVISION is resistant to water, moisture as well as all kinds of stains. All that is required is regular brushing and rinsing in clean water. The fabric can also be machine washed at 30°C and diluted bleach can also be used on stubborn stains at no risk to colours.

The fabric's water resistant features do not stop air from filtering through the fabric, and so prevents heat and water condensation from forming inside cushions or under parasols.

### UNBEATABLE RESISTANCE

Resistance to mildew, oblivious to salty and chlorinated water. Maximum protection against stains, fluorocarbon-treated to prevent the absorption of liquids.

### ULTRA-DURABLE COLOURS

Unique dyeing process, impregnated to the very heart of the fibre, from the first stage of manufacturing.

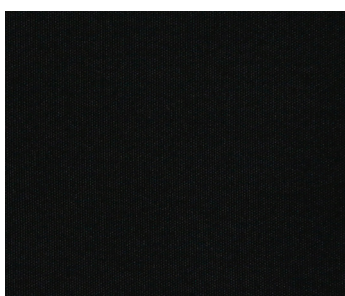

### EASY CARE AND MAINTENANCE

Specially treated fabric to avoid any build-up of stains or greasy substances.

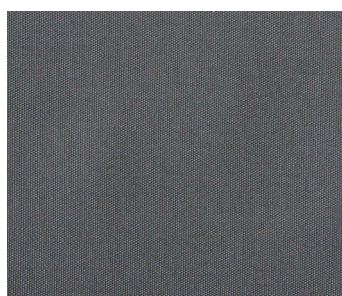

Machine-washable fabrics

### SPECIAL PERFORMANCES

- UV and weather resistance
- Water (salt and chlorine) and moisture resistance
- Non toxic and environmental friendly
- Strong and durable
- Recyclable
- Washable (30°C)
- Maintenance free
